

Tire-Fitting made easy

# Tailwheel

**210x65 (2.50x3)**

The lifetime solution for your tailwheel with innovative design and high quality materials.

Tire-fitting on an un-divided rim is very difficult and ends quite often with a damaged tube. The divided rim makes this job much more easy. Since 20 years we sell a wheel 200 x 50mm with a divided rim. It proved itself as almost undestroyable.

We have extended our program by the size of 210 x 65 mm (2.50-3) and offer you an affordable solution of high quality and superb handling.

## Users

Schleicher (all types), Scheibe, Falke  
Jonkers, Binder, LAK, HPH, Lange, Glasflügel, DG, LS and others.  
Special designs on request. Possible to deliver with or without tube.

## Design

2-part rim, moulded with durable high quality black POM 500 plastic  
6 inbus screws (size (M6x40) Hex guided nuts are lowered and flat with the outside.  
Rim flanks have many small ribs to avoid coat rifting while landing. Both rims latch into each other for a solid joint.  
Rigid tube with 90° valve  
Best quality 4 PR plies, tight fit on the rim bet. Max. 4 bar.  
Maintenance free all enclosed ball bearings for long life  
Aluminium spacers and guid bush for an easy assembling to the wheel housing.

## Technics

Bearing ID 12 mm, Guide 12 x 8,2 mm, Length 80 mm, with aluminium side guides for M8 axles  
Rim: OD 96mm, Wide 51mm  
Tyre: 210 x 65 (2.50x3), OD 212 mm, Wide 69 mm  
Weight: Rim 220 gr., completely assembled 1.100 gr.
